

ACCESSIBLE. ACTIONABLE. ANSWERS.

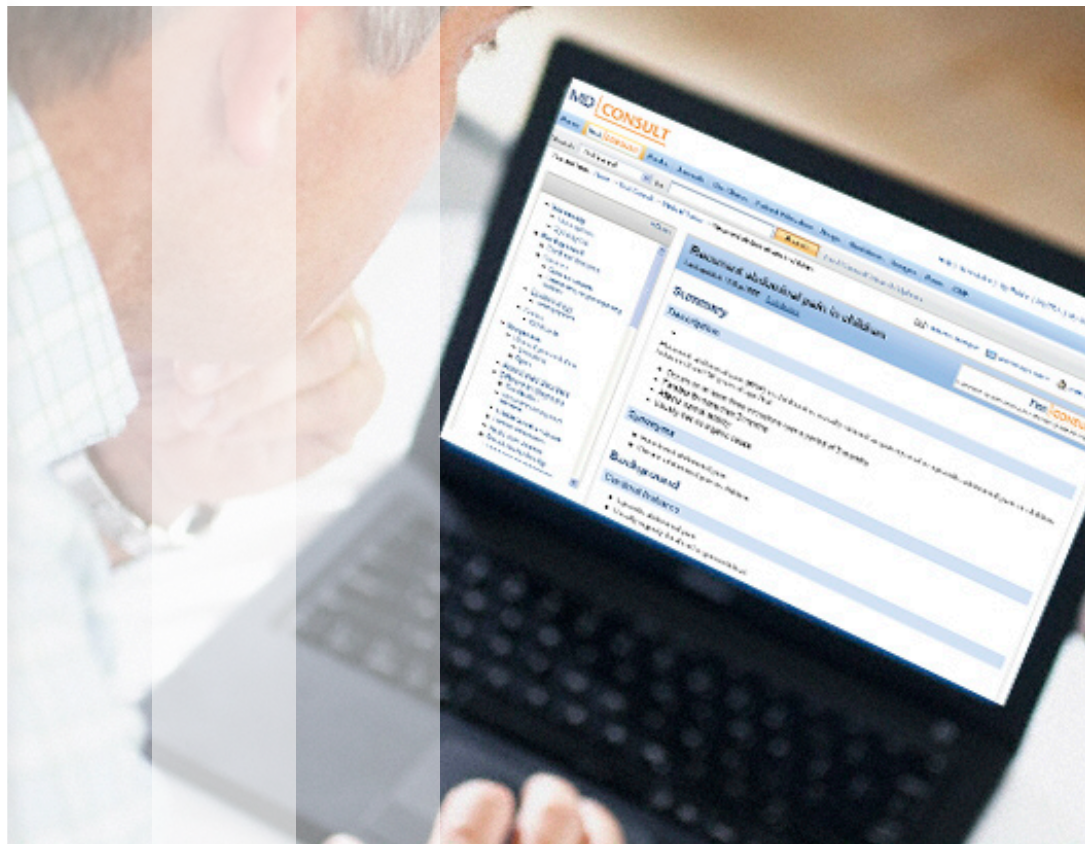

First | **CONSULT**

Evidenced-based answers at the point-of-care.

# Point-of-care clinical resources with user- friendly access.

First Consult can be used  
as a simultaneous search  
engine within  
MD Consult for single  
portal information access.

## Power up your MD Consult experience with integrated, evidence-based answers at the point-of-care.

First Consult is an evidence-based, clinical information resource designed for use at the point-of-care. By purchasing MD Consult with First Consult, you will provide your constituents instant, user-friendly access to the latest information on evaluation, diagnosis, clinical management, prognosis, and prevention.

### First Consult supports clinicians within their workflow:

- **Evidence-based** – concise, readable summaries of evidence that relate to patient care. Graded evidence sources, evaluation, definitions and guidelines as well as clinical pearls are provided. Citations throughout link to MD Consult, PubMed, CrossRef and local holdings.
- **Differential Diagnosis Tool** – supports clinical judgement through rapid evaluation of presenting signs and symptoms, with interactive access to lists of 1,800 potential diagnoses sorted by age and relative order of prevalence.
- **Medical Topics** – Medical Topics covering 23 specialties are organized into 7 sections (Summary, Background, Diagnosis, Treatment, Outcomes, Prevention, Resources) and then into 50 topic headings, thereby providing access to over 20,000 aspects of the disease-specific topics.
- **Procedures** – provides clear, systematic guidance, in the form of text and animation for common medical procedures.

of evidence-based  
clinical resources at  
the point-of-care.

## Content you can trust from Elsevier.

Content is written and peer-reviewed by practicing physicians with academic affiliations, in a collaborative authoring environment. This rigorous multi-phase process includes expert review by appropriate specialists or subspecialists, CAM specialists, and PharmDs at several points in the content cycle.

## Empower your EHR with First Consult.

Because the Electronic Health Record (EHR) is changing the practice of medicine today, First Consult has been designed to integrate the evidence-based support for patient evaluation, diagnosis, and management within the current electronic health record application at your organization.

Specifically created for use at the point-of-care, First Consult provides instant access to concise, clinical reference information directly into the practitioner's workflow within the EHR. First Consult offers Elsevier's trusted reference information as a decision support service:

- organized around the clinical workflow
- indexed to taxonomies, such as ICD-9 and SNOMED CT
- using patient information directly from the EHR (including demographic criteria such as age, gender, etc.)
- from authoritative trusted sources
- using industry standards to ensure interoperability

First Consult will deeply integrate with your EHR so that clicking on a patient complaint instantly brings up the possible diagnosis for that patient's age. The patient's diagnosis is then linked directly to the Medical Topic. For more information about EHR integration, visit [www.ClinicalDecisionSupport.com](http://www.ClinicalDecisionSupport.com).
